High-quality lens cloth made of P-9000®-Microfiber rPET for gentle cleaning of spectacle lenses and optics. The microfibre, specially developed for sensitive surfaces, ensures streak-free cleaning of the lenses. It reliably removes greasy dirt such as fingerprints, gives your glasses a flawless shine and provides a clear view.

Application

Preferably use mist-damp or dry. The glasses should be dust-free. Small particles of dirt can damage the lens. Please refer to the care instructions of the spectacle manufacturer. After use, always keep the cloth dust-free in the packaging.

P-9000®-Microfiber rPET
(70% recycled polyester | 30% polyamid)

Do not use fabric softener.
